Aquaponics Everything You Need To

An aquaponic system is comprised of: Grow bed: this is where the plants are grown The media: gravel or small rocks that keep the roots of the plants in place The fish tank The biofilter: this is where those hard-working bacteria live and reproduce. Many grow beds nowadays have built-in...

Everything You Need To Know About Aquaponics | GreenHousesHub

Aquaponics allows plants and other living creatures to cohabitate within a shared environment, while taking advantage of each other's assets. Here is a breakdown of its basic functioning. Step 1 - Fish, or whichever animals are being raised, need to be fed regularly on food chosen by the grower/caretaker. It can be any commercial food available in pet stores or aquaculture stores, a homemade mix of organic ingredients, or anything in between.

Everything you need to know about aquaponics - Sensi Seeds

In short, you will need to provide a source of de-chlorinated water and it is a good idea to have your source water tested for any potential toxins, hardness levels, pH, heavy metals, and other contaminants. This will allow you (or us) to determine a proper filtration system to ensure good water is being delivered to your system.

If you are doing backyard aquaponics with growbeds, you don't need solids filtration. If you have the right stocking densities of 1 pound of fish for every cubic foot of growing media, you don't need a solids filter. The nitrification and solids breakdown will happen in the grow bed. If you do not follow this rule, you need a filter.
