devices that are built into your computer. `lsusb`. This test computer has a Canon scanner attached to it as USB device 5, and an external USB drive as USB device 4. Devices 3 and 1 are internal USB interface handlers.

How to List Your Computer's Devices From the Linux Terminal

Get Free Linux Device Drivers Where The Kernel Meets The Hardware

Linux has a monolithic kernel. For this reason, writing a device driver for Linux requires performing a combined compilation with the kernel. Another way around is to implement your driver as a kernel module, in which case you won't need to recompile the kernel to add another driver. We'll be concerned with this second option: kernel modules.
