The fan at the side of the engine compartment is activated by a sensor which sits in the middle of the engine compartment above the coolant hose (there several sensors attached to this hose). It is seated in an elevated metal bracket with one wire attached. When the engine compartment reaches a certain temperature, the sensor activates the fan.

Features: Lower Air Temperatures, contrary to popular belief the mr2 engine bay and its "natural air from under the car and through the engine lid vents" is not efficient in cooling necessary components at all. With both fans on BLOWING INTO the engine bay, we and other customers noticed side mounted intercooler core/air intake charge temperatures dropped 20-40 degrees F. Additionally, intake manifold, IC pipes, intake, and top mounted intercoolers temperatures, side mounted intercooler ...
