Tabular Modeling In Microsoft Sql

Tabular models are created in Microsoft Visual Studio with the Analysis Services projects extension. The extension installs a tabular model designer, which provides a design surface for creating semantic model objects like tables, partitions, relationships, hierarchies, measures, and KPIs. Tabular models can be deployed to Power BI Premium, Azure Analysis Services, or an instance of SQL Server Analysis Services configured for

you will learn how to build, deploy, and query a tabular model by following detailed examples and best practices.

Amazon.com: Tabular Modeling in Microsoft SQL Server

...

The Tabular model uses a different engine (xVelocity) and it is designed to be faster for queries based in columns, because it uses columnar storage (multidimensional models use row storage) in addition to better data compression. The data is stored in memory, so it is very important to have a lot of memory in your server and very fast CPUs.

Tabular vs Multidimensional models for SQL Server Analysis ...

When Microsoft released SQL Server 2012, they introduced the SQL Server Analysis Services (SSAS) tabular model, an in-memory database that uses the xVelocity analytics engine and state-of-the-art compression algorithms. You can think of the tabular model as a cross between a SQL Server relational database and an SSAS multidimensional cube.

Getting Started with the SSAS Tabular Model - Simple Talk

This is because how you create and deploy a tabular model by using Visual Studio, or manage certain server properties or databases by using SQL Server Management Studio and other tools is much the same, regardless of platform.
